## Application of Nanotechnology in Water Research

### **Details the water research applications of nanotechnology in various areas including environmental science, remediation, membranes, nanomaterials, and water treatment**

At the nano size, materials often take on unique and sometimes unexpected properties that result in them being 'tuned' to build faster, lighter, stronger, and more efficient devices and systems, as well as creating new classes of materials. In water research, nanotechnology is applied to develop more cost-effective and high-performance water treatment systems, as well as to provide instant and continuous ways to monitor water quality.

This volume presents an array of cutting-edge nanotechnology research in water applications including treatment, remediation, sensing, and pollution prevention. Nanotechnology applications for waste water research have significant impact in maintaining the long-term quality, availability, and viability of water. Regardless of the origin, such as municipal or industrial waste water, its remediation utilizing nanotechnology can not only be recycled and desalinated, but it can simultaneously detect biological and chemical contamination.

*Application of Nanotechnology in Water Research* describes a broad area of nanotechnology and water research where membrane processes (nanofiltration, ultrafiltration, reverse osmosis, and nanoreactive membranes) are considered key components of advanced water purification and desalination technologies that remove, reduce, or neutralize water contaminants that threaten human health and/or ecosystem productivity and integrity. Various nanoparticles and nanomaterials that could be used in water remediation (zeolites, carbon nanotubes, self-assembled monolayer on mesoporous supports, biopolymers, single-enzyme nanoparticles, zero-valent iron nanoparticles, bimetallic iron nanoparticles, and nanoscale semiconductor photocatalysts) are discussed. The book also covers water-borne infectious diseases as well as water-borne pathogens, microbes, and toxicity approach.

### From reader reviews:

#### **Randall Briggs:**

The book Application of Nanotechnology in Water Research make you feel enjoy for your spare time. You can utilize to make your capable more increase. Book can to be your best friend when you getting tension or having big problem together with your subject. If you can make reading a book Application of Nanotechnology in Water Research to get your habit, you can get more advantages, like add your own capable, increase your knowledge about a number of or all subjects. You can know everything if you like start and read a book Application of Nanotechnology in Water Research. Kinds of book are several. It means that, science book or encyclopedia or other people. So , how do you think about this guide?

#### **Denita Lumley:**

Information is provisions for those to get better life, information today can get by anyone in everywhere. The information can be a understanding or any news even a huge concern. What people must be consider whenever those information which is inside former life are difficult to be find than now is taking seriously which one would work to believe or which one the actual resource are convinced. If you receive the unstable resource then you get it as your main information it will have huge disadvantage for you. All of those possibilities will not happen in you if you take Application of Nanotechnology in Water Research as the daily resource information.

#### **Terrance Bartholomew:**

The particular book Application of Nanotechnology in Water Research will bring that you the new experience of reading the book. The author style to describe the idea is very unique. When you try to find new book you just read, this book very acceptable to you. The book Application of Nanotechnology in Water Research is much recommended to you you just read. You can also get the e-book from the official web site, so you can easier to read the book.

#### **Roger Richmond:**

Application of Nanotechnology in Water Research can be one of your beginner books that are good idea. We recommend that straight away because this reserve has good vocabulary that will increase your knowledge in vocabulary, easy to understand, bit entertaining however delivering the information. The article author giving his/her effort to get every word into delight arrangement in writing Application of Nanotechnology in Water Research yet doesn't forget the main level, giving the reader the hottest along with based confirm resource details that maybe you can be certainly one of it. This great information can easily drawn you into brand-new stage of crucial thinking.
