Sensor Networks

Emily Gertz, Patrick Di Justo

Sensor Networks Emily Gertz, Patrick Di Justo

Environmental monitoring projects have taken off with ubiquitous smartphones and low-cost, amateur-friendly microprocessors like Arduino and Raspberry Pi. This book explores both the gear and the human side of the sensing revolution. You'll learn how networks of people can conceive and build sensor systems, develop best practices for collecting, analyzing, and drawing information from the data, and then use the results to affect real-world issues.

In the process, you'll explore several issues that many hobbyists, makers, artists, journalists, and activists encounter when building a sensor network, such as: how do you power them? What is "good" versus "bad" data, and how do you tell them apart? How do you collect your data: over the air or by hand from each device? And how do you analyze your data effectively and make it accessible to others?

- Learn how sensor network design solutions relate to the problem being solved
- Get case studies on significant sensor network projects—how they work and what they've revealed
- Find answers to tricky questions in scaling a sensor network, such as power supply and data transmission
- Discover how to avert GIGO in data analysis: Garbage in, garbage out
- Learn about sensor networks and the democratization of data

From reader reviews:

Charles Settles:

Information is provisions for people to get better life, information currently can get by anyone from everywhere. The information can be a understanding or any news even a concern. What people must be consider whenever those information which is in the former life are hard to be find than now's taking seriously which one is suitable to believe or which one the particular resource are convinced. If you obtain the unstable resource then you understand it as your main information there will be huge disadvantage for you. All of those possibilities will not happen throughout you if you take Sensor Networks as your daily resource information.

Gerard Williams:

The book Sensor Networks will bring that you the new experience of reading any book. The author style to elucidate the idea is very unique. In the event you try to find new book you just read, this book very acceptable to you. The book Sensor Networks is much recommended to you to study. You can also get the e-book in the official web site, so you can quickly to read the book.

Pauline Lipman:

Your reading sixth sense will not betray a person, why because this Sensor Networks reserve written by well-known writer who knows well how to make book that could be understand by anyone who read the book. Written with good manner for you, leaking every ideas and composing skill only for eliminate your personal hunger then you still hesitation Sensor Networks as good book not only by the cover but also from the content. This is one guide that can break don't assess book by its deal with, so do you still needing one more sixth sense to pick that!? Oh come on your looking at sixth sense already said so why you have to listening to one more sixth sense.

April Harry:

Do you like reading a reserve? Confuse to looking for your selected book? Or your book was rare? Why so many issue for the book? But almost any people feel that they enjoy to get reading. Some people likes looking at, not only science book but additionally novel and Sensor Networks or even others sources were given understanding for you. After you know how the fantastic a book, you feel wish to read more and more. Science guide was created for teacher or even students especially. Those ebooks are helping them to put their knowledge. In different case, beside science publication, any other book likes Sensor Networks to make your spare time a lot more colorful. Many types of book like this.
