Manual of land surveying, with tables David Murray

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1875 Excerpt: ...will be 87.08: 19.08::12: correction for latitude, 1st course, =.026 87.08: 13.68::12: correction for latitude, 2d course, =.019 In most cases it is not necessary to compute the corrections by these proportions. They may be obtained sufficiently nearly by observing how much the error is for each chain, and then distributing the corrections in proportion to the number of chains. When the latitudes and departures have been thus corrected, recoid them in columns of " corrected" latitudes and departures. These ought to balance exactly. In the table of the example given, we have placed the northings and southings in the same column, marking the former + and the latter--; so also with the eastings and westings. 124. Beginning at the most westerly station, in this example at station F, compute the double meridian distances of each course according to the rule given in article 114, and record them in the column D. M. D. It is not absolutely essential to begin at the most westerly station; any other point of beginning might be used. But our explanation has been based on the supposition that the meridian to which the departures and meridian distances are referred passed through the most western station. This station may be determined by inspecting the notes of the survey, or by constructing a hand-sketch of the field surveyed. Of course, the most western station is not always the station from which the survey began, and which stands first in the notes. In this example, beginning at F, D. M. D. of FA = 8.18 To get D. M. D. of AB, we have, by the rule, D. M. D. of FA = 8.18 Departure of FA = 8.18 Departure of AB = 18.31 D. M. D. of AB = 34.67 To get D. M. D. of BC, we have, by the rule, D. M. D. of AB = 34.67 Departure of AB = 18.31 Departure of BC = -4.55 ...
