Carboranes offers a comprehensive treatment of carborane chemistry and covers topics ranging from structures and chemical bonding to the degradation of the icosahedral cage. Carborane polymers as well as small nido- and closo-carboranes, intermediate closo-carboranes, and o-, m-, and p-carboranes are also discussed.

This book is comprised of nine chapters and begins with an overview of the chemistry and properties of carboranes. The discussion then turns to the molecular structures of polyhedral carboranes and open-cage carboranes, along with the isomerism and rearrangement of carboranes; nomenclature and numbering systems used for carboranes; and chemical bonding in boranes and carboranes. The following chapters explore the synthesis, reactions, structures, and properties of small nido- and closo-carboranes, intermediate closo-carboranes, and o-, m-, and p-carboranes. The reactions of boranes and alkylboranes with alkynes as well as the degradation of icosahedral carboranes are also described.

This monograph will be a useful resource for organic and inorganic chemists.
